

HAPLOTYPES OF THE TNFRSF1A GENE

ABSTRACT OF THE INVENTION

Novel genetic variants of the Tumor Necrosis Factor Receptor Superfamily, Member 1A (TNFRSF1A) gene are described. Various genotypes, haplotypes, and haplotype pairs that exist in the general United States population are disclosed for the TNFRSF1A gene. Compositions and methods for haplotyping and/or genotyping the TNFRSF1A gene in an individual are also disclosed. Polynucleotides defined by the haplotypes disclosed herein are also described.
